

Task 4: Judgment & Communication

4a.

The platform I would recommend is WordPress, it does content management really well and is intuitive and easy for the customer to learn. I would not push back necessarily but, what I would put in place is some kind of granular access control to restrict what the customer can do and has access to and provide the least amount of access to perform their duties.

4b.

Step 1: Backup the entire website and database before attempting any changes on the site.

Step 3: Setup a staging environment so as not to make any untested changes on the live site.

Step 2: Perform a site audit to review any overlapping plugins and deactivate any plugins that are not needed and review any changes with the client before execution.

4c.

Dear Client

First off my sincere apologies that you experienced significant downtime on your ecommerce store. An unexpected conflict during a plugin auto update, necessary to keep your site secure, caused a conflict and took the site down.

We identified the issue immediately and took steps to roll back the update and turn off auto updates for plugins and themes.

Going forward, we have taken steps to set up a staging environment to test updates before they are applied to your live site. The updates will also be applied outside of the busy hours of the store.

We do understand this may have been an annoying issue for you but we assure you we have taken all the necessary steps to prevent this from happening again.

Your thankfully

NW Mutual Web Support Team
